

Installation Guide and Safety Manual

Resilmount A237R (Resilient Sound Isolation Clips)

Where to find hat channel?

Call Dietrich Metal Framing to find a dealer near you 877-474-4052 x1

Ask for 25 gauge 7/8" Drywall Furring Channel (other names can be Hat Channel or HI Hat Channel). NOT Resilient Channel.

RESILMOUNT A237R SPECIFICATIONS

Width	1.375 inch
Height	3.25 inch
Depth	1.125 inch
Weight025 lbs
Max Spacing	48" on center
Max Load	36 lbs

HAT (FURRING) CHANNEL SPECIFICATIONS

Gauge:	25 gauge with hemmed edge
Depth:	f"
Width Top:	1 1/4"
Width Bottom:	2 1/2" max

When splicing hat channel, overlap 6 inches in between two Resilmount Clips. Secure the channel with two 7/16" framing screws or 18 gauge tie-wire can be used.

* Available at your local building supply stores

FASTENERS

- (A) Wood: #8 x 2 1/2 Coarse Threads
- (B) Steel: #8, 10 or 12 x 1 5/8" Self-tapping Type S
- (C) Concrete: 3/16" dia. x 2 1/4" Anchor screws

DO NOT fasten Resilmount clips to framing members with nails. Use only approved screws.

WALL INSTALLATION GUIDE

NOTES

- Resilmount A237R shall not exceed 48 inches on center.
- Spacing between hat channels shall not exceed 24 inches.
- Fasten the Resilmount A237R to the substrate with a fastener approved for a minimum pull-out and shear of 120 lbs.
- Locate the bottom row of Resilmount A237R within 3 inches of the floor. (May be adjusted lower to accommodate installation of baseboard.)
- Hat Channels are installed horizontal to the floor.
- Use a 4 foot level to ensure that Resilmount A237R and hat channels are installed horizontal and level.
- Install the drywall vertically from the bottom up leaving a 1/4" thick gap around perimeter of wall to be filled with acoustical caulk. Caulk around the entire perimeter of the gypsum board.

STEP 1

Review Sound Isolation Company's layout guidelines before starting installation of walls or ceilings. (See page 7) We suggest installing the ceiling first, before installing the walls.

STEP 2

Space Resilmount A237R so not to exceed 48" on center. Secure clips with a single fastener through the middle screw hole in clip. (Fig 2.1)

Wood: Use #8 x 2-1/2" coarse thread screws

Steel: Use #8, 10 or 12 x 1-5/8" Type S self-tapping screws

Concrete: Use 3/16" dia x 2-1/4" Tapcon or equal anchor

STEP 3

Snap hat channel onto Resilmount A237R. (Fig 2.2)

Optional Method for Steps 2 & 3 (When using 25 Gauge Furring Channel)

Snap clips onto furring channel. Hand slide clips to proper location on the furring channel before installing it on the wall. Once located on the wall use a 4 foot level to ensure you are installing the clips and channel horizontal and level. Fasten both ends of the clip to secure the channel.

Figure 2.1: Screw clips into stud wall

Figure 2.2: Snap hat channel into clip

STEP 4

The floor shims are critical to ensure best results. Place 1/4" shims on the floor in front of sole plate (Fig 3.1). Install the first row of drywall vertically against the wall (Fig 3.2). Attach drywall to channel following local building codes.

Note: Only remove the shims after all the gypsum board is completely screwed to all the hat channels.

STEP 5

Use acoustical caulk around the entire perimeter of each wall. (See Figure 3.3)

LOAD SPECIFICATION FOR RESILMOUNT CLIP

A237R Clips are designed to carry hat channel with one or more layers of gypsum wallboard attached. The load capacity of the clip depends on the number and spacing of clips used.

The maximum design load capacity for the A237R Clips in shear (wall application) or in tension (ceiling application) is as follows. Design load calculations are based on tested loading to failure where the furring channel deforms.

Standard Clip Spacing Load Capacity	2:1 safety factor	2.5:1 safety factor*
A237R with 25 gauge steel Hat Channel	45 lbs	36 lbs

* Suggested safety factor of 2.5:1 for more critical life safety applications

Note: 5/8" thick gypsum wallboard weighs 2.3 lbs/sq ft.
1/2" thick gypsum wallboard weighs 1.85 lbs/sq ft.

Where to find hat channel? Call Dietrich Metal Framing to find a dealer near you 877-474-4052 x1 Ask for 25 gauge 7/8" Drywall Furring Channel (other names can be Hat Channel or HI Hat Channel). NOT Resilient Channel.

GENERAL INFORMATION

All potential sound leaks such as gaps around outlets, windows, door frames, pipe penetrations, etc should be sealed with a non-hardening acoustical sealant or resilient putty.

See Sound Isolation Company's Sealtight Putty Pads, for even better results. Wall and ceiling assemblies and the specific construction requirements are listed at: www.soundisolationcompany.com/sealtight

CEILING INSTALLATION GUIDE

NOTES

- Resilmount Clip shall not exceed 48" on center
- Spacing between hat channels shall not exceed 24"
- Fasten the Resilmount to the substrate with a fastener approved for a minimum pull-out and shear of 120lbs.
- Locate the first row of Resilmount Clips with 6" of the wall and within 6" of the opposite wall.
- Hat Channels are installed perpendicular to the joists
- Install the gypsum board leaving a 1/4" thick gap around perimeter to be filled with acoustical caulk.
- Caulk around the entire perimeter of the gypsum board.

STEP 1

Review Sound Isolation Company's Resilmount Clip layout guidelines before starting installation of walls or ceilings. (See page 8) We suggest installing the ceiling first before installing the walls.

STEP 2

Space Resilmount Clips so not to exceed 48" on center. Secure Resilmount Clips with a single fastener through the top screw hole in clip.

Wood: Use #8 x 2-1/2" coarse thread screws

Steel: Use #8, 10 or 12 x 1-5/8" Type S self-tapping screws

Concrete: Use 3/16" dia x 2-1/4" Tapcon or equal anchor

STEP 3

Secure with screw/anchor into floor joists. (See Figure 5.1)

Snap Hat Channel into Resilmount Clips. (See Figure 5.2)

Figure 5.1: Screw A237R into joists

Figure 5.2: Snap Hat Channel into Clip

Optional Method for Steps 2 & 3 (When using 25 Gauge Furring Channel)

Snap clips onto furring channel. Hand slide clips to proper location on the furring channel before installing it on the ceiling. Once located on the ceiling use a 4 foot level to ensure you are installing the clips and channel horizontal and level. Fasten both ends of the clip to secure the channel.
